

The logo features the word "Naturcycle" in a white, sans-serif font, centered within a dark green, leaf-like shape. A thin white horizontal line passes through the middle of the leaf, positioned just below the text.

Naturcycle

UX/UI CASE STUDY

Introduction

Overview

NaturCycle is a sustainable beauty brand that turns recycled human waste into high-quality skincare. Inspired by the circular economy, it reduces environmental impact while offering eco-friendly products. By combining innovation with sustainability, NaturCycle encourage people to make mindful choices and shows that even waste can lead to a cleaner, greener future

Goals

Design Goal

Create an easy-to-use, engaging app with features like personalized skin-care, recycling programs, and impact tracking.

Client Goal

Boost brand reputation, grow recycling participation, increase sales, and build loyalty through rewards and engagement.

Project Vision:

Vision overview

Ideas

- Make it easy to explore and buy products through a clean, simple interface.
- Encourage users to join and stay engaged in the recycling program.
- Show clear, personalized data on how each user's recycling helps the environment

Uncertainties

- Overcoming concerns about using human waste in skincare.
- Balancing education and simplicity in the user experience.
- Scaling smoothly as features and users grow.

Success Measures

- High engagement with Skin analysis, recycling, and rewards features.
- Positive user feedback on app experience and products.
- Growth in recycling participation and active user base.

My Role

UX Designer

Led user research, built personas and empathy maps, and designed user-first app flows to improve the experience.

Researcher

Ran competitor analysis, studied user behavior, and validated ideas through testing and iteration.

Visual Designer

Created polished wireframes and a clean, eco-inspired design that reflects NaturCycle's brand.

Prototype Developer

Built an interactive prototype with key features like skin analysis, AR try-ons, and recycling rewards.

The Client Intro.

UX Designer

Goals

Redefine beauty through sustainability.

Transform human waste into luxurious, eco-conscious cosmetics.

Educate and inspire consumers to embrace environmental responsibility.

Minimize the carbon footprint and cosmetic industry waste.

Create a loyal community that values ethical, natural skincare

Slogan / Tagline

"Reveal Your Natural Beauty, Revive the Planet."

"Where Beauty Meets Sustainability."

"Choose Beauty with Purpose."

Mission

NaturCycle's mission is to revolutionize the beauty industry by offering sustainable skincare made from recycled human waste, proving that luxury and responsibility can coexist.

Vision

To be the world's leading eco-beauty brand that empowers consumers to care for their skin while healing the Earth

Client

Logo

The NaturCycle logo clearly reflects the brand's commitment to sustainability and innovation. Its leaf shape instantly conveys nature and eco-conscious values, while the sharp right tip suggests progress and transformation. A white line running through the leaf symbolizes balance and the circular life cycle, tying into the brand's mission of turning waste into beauty. The modern, rounded sans-serif font feels clean, friendly, and trustworthy, with the "y" subtly breaking the line to hint at innovation. The earthy green background adds a grounded, organic feel, while the white text emphasizes purity and transparency. Overall, the logo is simple, elegant, and perfectly aligned with NaturCycle's message of sustainable beauty.

Consumers' Sustainable Beauty Attitudes

May 31st, 2022 | By Denise Herich, The Benchmarking Company

In 2019, The Benchmarking Company surveyed beauty consumers about sustainability and packaging choices. Results showed that electing to make cleaner or sustainable choices was somewhat important, but the commitment to buying green and sustainable products wasn't paramount.

Consumer's behavior intention in using green skincare products

Adik Praburjo* & Rahmad Wijaya
Universitas Muhammadiyah Malang, Malang, Indonesia

ABSTRACT: Increasing environmental awareness among the public motivates consumers to use green cosmetic products. Green skin care products are the fastest growing sector in the world-wide market compared to other green cosmetic products. However, compared to general cosmetic products, the market share of green cosmetic products in Indonesia is relatively low. The purpose of this study is to investigate consumer purchase intention for green skin care products in Indonesia. Therefore, this study uses a sample of 200 respondents. The sample in this study was determined by the non-probability sampling method because the total population is not known with certainty. The sampling technique used was purposive sampling with criteria: (1) 17 years old; (2) had bought the brand. The data analysis technique in this study used is multiple regression analysis. The results of this study indicate that there is a significant influence of independent variables, including environmental awareness, past experience, and social influence on purchase intention.

Keywords: Green Skincare, Environmental Awareness, Past Experience, Social Influence

1 INTRODUCTION

Environmental issues have increasingly become a part of public attention over the last few years. For decades, companies have motivated consumers to buy green products (Dadfar et al. 2014). The increasing awareness among consumers to buy green products has led to increased attention focused on caring for the environment (Kong et al. 2014). According to a worldwide survey conducted by Nielsen Company in 2015, the Asia-Pacific region has the largest number of consumers the second highest who want an increase in the availability of green products in the market (Nielsen 2015). As a result, the green strategy has become an important aspect of supporting business sustainability. Green companies are becoming more important in modern manufacturing. However, only a few companies are able to implement green strategies in their organizations. Many companies apply the concept of green as cut cost because it is not clear and varied, the definition of "green" which has led to differing interpretations among practitioners (Khanok 2017). The term "green" is defined as "the environment needs to be part of the consideration for products or services that will not pollute the earth or deplete natural resources" (Paul et al. 2016). Considerable effort is required for a truly green company. Companies should implement eco-friendly initiatives into their activities to embrace opportunities. The term "environmentally friendly" originates from social discourse and is based on values, attitudes, perceptions, knowledge, and behaviors related to the environment. Companies that implement environmentally friendly initiatives are able to increase consumer purchase intentions for green products and support global trends to protect the environment (Rie et al. 2017).

Sustainability as strategy: Natural ingredients for cosmetics driving growth

The shift toward sustainability in the cosmetics industry is illustrated by the burgeoning market for natural ingredients, projected to expand from USD \$442 million in 2022 to USD \$695 million by 2030. This trend reflects a significant change in consumer behavior, with over 40% of shoppers prioritizing natural components in their beauty and personal care products. The demand for environmentally sustainable, safe cosmetics is reshaping how products are formulated, driving an increase in research dedicated to natural ingredients for cosmetics. Supporting this observation, data from the CAS Content Collection™ highlights a significant growth in journal and patent publications related to natural cosmetics over the last decade.

01

How important is "clean beauty" to consumers when they buy cosmetic products?

A large proportion of consumers in 2023 believe that 'clean beauty' is important, to some degree, when buying beauty products.

This trend reveals that consumers value health, safety, and environmental sustainability in their cosmetics and beauty habits.

02

When asked if they were willing to pay more for cosmetic products that came in sustainable packaging...

Some shoppers are willing to pay more for sustainability. However, a lot of consumers are still price-sensitive and might take additional things into consideration.

Speed Sketches A/B testing

8 Minute Speed Sketching

This 8-minute wireframe sketch outlines a clean, grid-based layout for the NaturCycle app, featuring a logo, hero image, product sections, navigation tabs, and a recycling tracker. The design emphasizes easy browsing, sustainability tracking, and product discovery, ensuring a smooth eco-conscious shopping experience. I wanted to use some of the icons and graphs into the A/B testing.

A/B Testing

The two UI layout variations (A & B) for the NaturCycle app, featuring a logo, hero image section, navigation bar, and a sustainability cycle tracker. The design focuses on visual storytelling, eco-impact tracking, and an intuitive user experience for an environmentally conscious audience. A is more typical shopping app interface but B is more eco centric design with how much impact the company is making to the environment.

A/B Testing Result

Minimalist Design:

"I like design A (minimal design)."

"It is easy to understand & has less info to read at once."

Navigation & Clarity:

"Bottom buttons are cool!"

"I like the bottom bar; it's clean!"

"A is better than B; clearly see all the sections."

"Maybe add a navigation at the beginning so the user doesn't get lost. It is great!"

"I like A. It has better flow."

Suggestions for Improvement:

"Maybe less buttons on the bottom?"

"Maybe add a burger menu instead?"

"More pointed towards showcasing products."

"Less cluttered."

Visual Appeal:

"B looks futuristic."

"The graphic may be interesting for this kind of field (skincare)."

Concerns:

"In Design B, the presence of a circle for the small size may confuse the customer."

"The circle part is a bit confusing for the home screen."

Modification from Design A

Based on the feedback and votes favoring Layout A, I have modified the logo to enhance recognition and improve user clarity. To better highlight products, as suggested, I have added category icons below the hero image for easier navigation. Additionally, I have reduced the height of the hero image and promotional section, allowing more products to be visible on the first screen without scrolling.

App Wire frame Sketches

The image displays four mobile application screens for a brand named 'NaturCycle'. Each screen has a status bar at the top showing the time as 9:41 and various connectivity icons.

- SIGN IN:** Features the 'NaturCycle' logo, a login prompt 'Log in to access your account', input fields for 'user ID' and 'password', a 'Log In' button, a link for 'Forgot your password?', and social login options for Google, Apple, and Facebook. A 'Sign Up' link is at the bottom.
- HOME:** Shows the 'NaturCycle' logo, a large hero image placeholder, a 'Category' section with six icons, a promotional banner for '50% off on select items!' with a 'Register' button, a 'Recommendation' section with three product placeholders, and a bottom navigation bar with five icons.
- CATALOG:** Displays the 'NaturCycle' logo and a grid of ten product image placeholders. The bottom navigation bar is identical to the Home screen.
- PRODUCT PAGE:** Shows the 'NaturCycle' logo, a product image placeholder with a heart icon, the 'Product Name' (5 stars, 427 reviews), a 'Product Description', a quantity selector set to '10', an 'Add to Cart' button, and two paragraphs of descriptive text about 'Revive Glow Moisturizer'. The bottom navigation bar is identical to the Home screen.

Shows detailed product info, images, ratings, customization options, and a virtual try-on feature.

Mid Fidelity Wire Frames

CART

Displays selected items with options to adjust quantities, remove products, and proceed to checkout.

MY PAGE

Research

Interview Notes

User-Driven Features (Based on Interview)		
Idea from Voice Recording	App Feature / UX Solution	UX/UI Notes
Eco-friendly focus	Sustainability Hub – A section that explains the brand's environmental impact, including stats on carbon saved, waste recycled, etc.	Include interactive infographics and motion design to show impact
Public hesitation around "human waste"	Transparency Pages – "Science Behind NatureCycle" – with digestible scientific explanations, ingredient sourcing, and user safety assurances	Micro-interactions for revealing facts and lab reports
Skin personalization	Skin Analyzer – Users take a photo or quit to get tailored product matches	Use soft pastel UI with guided steps and friendly feedback
Rewards system	EcoPoints System – Gamified dashboard where users earn points for purchases, recycling, and referrals	Include badge icons, progress bars, and discount unlocks

Actionable Changes for Your App Interface

1. Home Screen CTA

Before: "Discover Skincare" **After:** → "Reveal Your Natural Glow — Sustainably"

Justification: Adds emotional and brand-aligned appeal.

2. New Section: "Your Impact"

Add a **dashboard card** that shows:

- How much waste the user has recycled
- Water saved
- Emissions prevented

3. Educational Onboarding

First-time users could go through a 3-step animated onboarding:

- Step 1: What is NaturCycle?
- Step 2: Why we use nutrient recovery
- Step 3: How it benefits your skin and the Earth

Keep it short and swipe-friendly, with skip options.

4. Skin Quiz or Selfie Scanner

Route users through a “Start Skin Journey” feature:

- Option A: "Take our 1-minute quiz"
- Option B: "Scan your face with AI"

Tailor the layout like a card deck, with horizontal progress feedback.

Other changes suggested

1. Swipe to delete
2. Total in the shopping cart
3. Review not clear.
 - a. Make it into customer support
4. Community connects or blogs
5. Put everything on settings
6. Make the icons bigger for my page
7. Button to take picture for skin analysis
8. Instructions how to use the skin analysis
9. Headers for skin analysis data
10. Page buttons current page indicator
11. Category text under the icons
12. Separation line between product story and description.

Flow Chart (Assumptive)

Goal: Help users easily find and buy products while giving them the information they need to make the right product choices

Objective

To visualize the ideal path a user might take through the app based on your initial design assumptions, persona goals, and research insights before any user testing or validation.

Feedback

The price total section does not exist. The user would want to see the total amount price and even shipping, handling fees, tax and etc. There is no option for shipping. Some might want to choose slower and some might prefer faster shipping options.

Flow Chart (Validated)

Goal: Help users easily find and buy products while giving them the information they need to make the right product choices

Objective

To visualize the ideal path a user might take through the app based on your initial design assumptions, persona goals, and research insights before any user testing or validation.

Updated

Added process for shipping options and price total section so that user can see their total price and also options for shipping.

IA Site Map

This site map prioritizes a personalized, eco-conscious skincare experience by combining skin assessments and tailored recommendations with sustainability features like a recycling program and impact tracker. It supports a smooth shopping journey through organized e-commerce functions and builds trust with transparent ingredient info, reviews, and loyalty rewards focusing on user engagement, education, and long-term retention.

User Journey Map

Anna Green

32 | Marketing Manager | Seattle WA

Goal

To discover skincare products that align with her eco-conscious values and are safe for sensitive skin.

Stage	Awareness	Explore	Custom	Discover	Decision	Purchase	Complete
User Flow	Discover the App	Install the app / Login/ Sign Up / Home Screen	Skin Analysis / View Suggestions	Applies Filters / Product Detail	Adds items to cart / Reviews the cart	Proceed Order / Finalize the order	Receive items / Review Product
Action (Task & Goal)	Discover the app through ads or referrals. Research the app's purpose and features.	Create an account, log in, or visit as a guest. Browse the homepage.	Take the skin quiz or use AI analysis. Save favorite items for later consideration.	Search using filters or categories. Compare items, read reviews.	Select items to add to the cart. Verify cart details.	Choose a delivery method. Confirm payment and check for reward points or discounts.	Unbox and review the received items. Create content by sharing reviews.
Touch Points	App store listing, social media ads, influencer promotions	Login/sign-up screen, homepage featuring key categories or highlights	Interactive skin quiz or AI analysis interface, personalized suggestions	Search screen or bar, product detail pages	Cart preview page, button for proceeding to checkout	Checkout process, order confirmation, shipping notifications	Follow-up surveys, reorder reminders
Emotional States & Feelings	Skeptical curiosity  "I've heard about this eco-friendly cosmetics brand, but is it genuinely sustainable or just marketing like others?"	Engaged  "I like that I don't have to sign up, and the homepage highlights promotions and recycling programs, which makes it interesting."	Delighted  "Finally, a brand that accurately identifies my skin type and recommends the right products!"	Disappointed  "I wish there were more search filters, like cruelty-free or recyclable packaging. Those are the things I mainly look for these days."	Unsatisfied  "I had some questions before deciding to purchase, but it was hard to find the Q&A section. A chatbot or live support would have been helpful."	Disappointed  "I wish there was a final review step before completing the purchase. My address was almost incorrect!"	Impressed  "I love the way the products are packaged—no excessive wrapping, and all the containers are biodegradable!"
Opportunities	Highlight the brand's genuine sustainability efforts through testimonials and certifications.	Promote eco-friendly programs and product benefits prominently on the homepage.	No changes needed; continue providing accurate skin analysis and tailored product recommendations.	Add advanced filters like cruelty-free, recyclable packaging, and eco-certifications.	Implement a visible and accessible Q&A section or live chatbot for immediate support.	Add a final review step before checkout to confirm details like address and order items.	Encourage users to share unboxing experiences and reward reviews with points or discounts.
